VÄESTÖNMUUTOS- JA VÄESTÖRAKENNEKERTOIMET VUONNA 1977 LÄÄNEITTÄIN,
SUTUKAAVA-ALUEITTAIN JA KUNNITTAIN

Väestönmuutos- ja väestörakennekertoimia on julkaistu vuodesta 1974 lähtien. Lisäksi vuosien 1972 ja 1973 kertoimet ovat saatavina Tilastokeskuksesta.

Vuoden 1977 taulukko poikkeaa aikaisemmista eräissä suhteissa:

- Yleistä syntyneisyyslukua ei ole enää laskettu erikseen mies- ja naisväestöön suhteutettuna eikä yleistä hedelmällisyyslukua enää julkaista. Uutena hedelmällisyyttä kuvaavana mittana julkaistaan kokonaishedelmällisyysluku. Koska väestömäärältään pienillä alueilla kokonaishedelmällisyysluku vaihtelee suhteellisen paljon satunnaisesti, "normaalitason" osoittimiksi on laskettu kunnille myös kokonaishedelmällisyysluvun kolmivuotiskeskisarvo vuosien 1974-1976 kokonaishedelmällisyyslukuista. Keskiarvoja laskettaessa on otettu huomioon myös kuntaliitokset.
 - Yli 45-vuotiaiden kuolleisuuslukua ei enää julkaista, mutta se lasketaan edelleen vuosittain ja on pyynnöstä saatavissa Tilastokeskuksesta.
 - Väestön ikärakennetta koskevia suhdelukuja on lisätty.
- Muutokset perustuvat vuoden 1977 keväällä tehtyyn tarvetiedusteluun.

JAKAJA: Valtion painatuskeskus, PL 516 00101 Helsinki 10

Kontantförsäljning, Annegatan 44.

Julkaistavat kertoimet ovat seuraavat (numero viittaa sarakkeiden numerointiin):

1. Ylin rivi: Yleinen syntyneisyysluku; elävänä syntyneitä keskiikäluvun 1 000 henkeä kohden.
Toinen rivi: Kokonaishedelmällisyysluku. Luku ilmaisee, kuinka monta lasta 1 000 naista synnyttää voimassa olevien hedelmällisyyslukujen vallitessa koko hedelmällisyyskauteen olettaen, että kukaan heistä ei kuole ennen hedelmällisen kauden päättymistä.
Kolmas rivi: Vuosien 1974-76 kokonaishedelmällisyyslukujen keskiarvo (esitetään vain kunnittain).
2. Yleinen kuolleisuusluku: kuolleita keskiikäluvun 1 000 henkeä kohden.
3. Maassamuuton tulomuutto: 15 - 44-vuotiaiden alueelle muuttaneiden lukumäärä promilleina vastaavasta keskiikäluvusta.
4. Maassamuuton lähtömuutto: 15 - 44-vuotiaiden alueelta poismuuttaneiden lukumäärä promilleina vastaavasta keskiikäluvusta.
5. Maassamuuton muuttotase: maassamuuton tulomuutto (sarake 3) miinus maassamuuton lähtömuutto (sarake 4).
6. Tulosiirtolaisuus: ulkomailta alueelle muuttaneiden 15 - 44-vuotiaiden lukumäärä promilleina vastaavasta keskiikäluvusta.
7. Lähtösiirtolaisuus: alueen 15 - 44-vuotiaiden maasta muuttaneiden lukumäärä promilleina vastaavasta keskiikäluvusta.
8. Siirtolaisuustase: tulosiirtolaisuus (sarake 6) miinus lähtösiirtolaisuus (sarake 7).
9. Koko muuttotase: maassamuuton muuttotase (sarake 5) plus siirtolaisuustase (sarake 8).
10. Ikärakenne 0-6: 0 - 6-vuotiaiden keskiikäiluku prosentteina keskiikäluvusta.
11. Ikärakenne 0-14: 0 - 14-vuotiaiden keskiikäiluku prosentteina keskiikäluvusta.
12. Ikärakenne 15-44: 15 - 44-vuotiaiden keskiikäiluku prosentteina keskiikäluvusta.
13. Ikärakenne 15-64: 15 - 64-vuotiaiden keskiikäiluku prosentteina keskiikäluvusta.
14. Ikärakenne 65+: 65 vuotta täyttäneiden keskiikäiluku prosentteina keskiikäluvusta.
15. Ikärakenne 75+: 75 vuotta täyttäneiden keskiikäiluku prosentteina keskiikäluvusta.
16. Keskiikäiluku: edellisen vuoden lopun väkiluvun ja tilastovuoden lopun väkiluvun aritmeettinen keskiarvo.
17. Sukupuolirakenne: 15 - 44-vuotiaita naisia sataa 15 - 44-vuotiaista miestä kohden.

Lisäksi Tilastokeskuksessa on saatavissa seuraavat kertoimet:

18. Ikärakennekerroin 45+: 45 vuotta täyttäneiden keskiväkiluku prosentteina keskiväkiluvusta.
19. Hedelmällisyysindeksi: alueen yleinen hedelmällisyysluku verrattuna koko maan yleiseen hedelmällisyyslukuun (koko maa = 100).
20. Kuolleisuusindeksi: alueen yleinen kuolleisuusluku verrattuna koko maan yleiseen kuolleisuuslukuun (koko maa = 100).
21. Tulomuuttoindeksi: alueen tulomuutto (maassamuuton tulomuutto sekä tulosiirtolaisuus) verrattuna koko maan vastaavaan lukuun (koko maa = 100).
22. Lähtömuuttoindeksi: alueen lähtömuutto (maassamuuton lähtömuutto sekä lähtösiirtolaisuus) verrattuna koko maan vastaavaan lukuun (koko maa = 100).
23. Nettomuuttoindeksi 2: vuoden lopun 16 - 45-vuotiaiden väkiluvun suhde edellisen vuoden lopun 15 - 44-vuotiaiden väkilukuun vähennettynä tilastovuoden kuolleisuudella.
24. Yleinen hedelmällisyysluku: elävänä syntyneiden lukumäärä promilleina 15 - 44-vuotiaiden naisten keskiväkiluvusta.
25. 45 vuotta täyttäneiden kuolleisuus: 45-vuotiaana tai sitä vanhempina kuolleiden lukumäärä promilleina 45 vuotta täyttäneiden keskiväkiluvusta.

Kertoimet on laskettu suhteuttamalla väestönmuutostapahtumien lukumäärä yleensä alueen keskiväkilukuun, tai milloin kerroin kuvaa jotakin osaväestöä, vastaavan osaväestön keskiväkilukuun. Esim. 15 - 44-vuotiaiden miesten lähtösiirtolaisuus on suhteutettu 15 - 44-vuotiaiden miesten keskiväkilukuun.

Kertoimia käytettäessä on huomattava, että vuotuisen satunnaisvaihtelun vaikutus väestönmuutuskertoimiin on sitä suurempaa mitä pienemmille väestömäärille kertoimet on laskettu. Empiirisen tarkastelun antamien tulosten mukaan alle 10 000 asukkaan kunnille laskettuja kertoimia ei voida pitää niin luotettavina, että voitaisiin puhua syntyneisyyden tai kuolleisuuden tietystä tasosta kunnassa yhden vuoden lukujen perusteella. On kuitenkin katsottu aiheelliseksi julkaista vuosittaisia väestönmuutuskertoimia sellaisenaan myös alle 10 000 asukkaan kunnille, koska ne ovat käyttökelpoisia, jos tarkastellaan useamman peräkkäisen vuoden lukuja samanaikaisesti. Näin on hyvä menetellä myös suurempien kuntien osalta.
