### VÄESTÖNMUUTOS- JA VÄESTÖRAKENNEKERTOIMET VUONNA 1974 LÄÄNEITTÄIN, SEUTUKAAVALIITOITTAIN JA KUNNITTAIN

Tilastokeskus julkaisee nyt ensimmäisen kerran syntyvyyttä, kuolevuutta, muuttoliikettä sekä väestön ikä- ja sukupuolirakennetta kuvaavia suhdelukuja lääneittäin, seutukaavaliitoittain ja kunnittain. Tässä julkaistavat väestönmuutos- ja väestörakennekertoimet ovat seuraavat (numero viittaa taulukon sarakkeiden numerointiin):

1. Yleinen syntyneisyysluku: alueen elävänä syntyneiden lukumäärä promilleina keskväkiluvusta. Laskettu erikseen myös promilleina mies- ja naisväestön keskväkiluvusta.
2. Yleinen hedelmällisyysluku: alueen elävänä syntyneiden lukumäärä promilleina 15-44 vuotiaiden naisten keskväkiluvusta. Laskettu erikseen myös syntyneiden sukupuolen mukaan.
3. Yleinen kuolleisuusluku: alueen kuolleiden lukumäärä promilleina keskväkiluvusta.
4. Yli 45-vuotiaiden kuolleisuus: 45 vuotiaana tai sitä vanhempana kuolleiden lukumäärä promilleina 45 vuotta täyttäneiden keskväkiluvusta.
5. Maassamuuton tulomuutto: 15-44 vuotiaiden, alueelle saapuneiden lukumäärä promilleina vastaavasta keskväkiluvusta.
6. Maassamuuton lähtömuutto: 15-44 vuotiaiden alueelta poismuuttaneiden lukumäärä promilleina vastaavasta keskväkiluvusta.
7. Maassamuuton muuttotase: em. maassamuuton tulomuutto (sar. 5) miinus em. maassamuuton lähtömuutto (sar. 6).
8. Tulosiirtolaisuus: ulkomailta alueelle saapuneiden 15-44 vuotiaiden lukumäärä promilleina vastaavasta keskväkiluvusta.
9. Lähtösiirtolaisuus: alueen 15-44 vuotiaiden maasta muuttaneiden lukumäärä promilleina vastaavasta keskväkiluvusta.
10. Siirtolaisuustase: em. tulosiirtolaisuus (sar. 8) miinus em. lähtösiirtolaisuus (sar. 9),
11. Koko muuttotase: maassamuuton muuttotase (sar. 7) + siirtolaisuustase (sar. 10).

12. Ikärakennekerroin: 0-14 vuotiaiden keskiväkiluku prosentteina keskiväkiluvusta.
13. Ikärakennekerroin: 15-65 vuotiaiden keskiväkiluku prosentteina keskiväkiluvusta.
14. Ikärakennekerroin: 65 vuotta täyttäneiden keskiväkiluku prosentteina keskiväkiluvusta.
15. Ikärakennekerroin: 15-44 vuotiaiden keskiväkiluku prosentteina keskiväkiluvusta.
16. Keskiväkiluku: edellisen vuoden lopun väkiluvun ja tilastovuoden lopun väkiluvun aritmeettinen keskiarvo.
17. Sukupuolirakenne: 15-44 vuotiaita naisia sataa 15-44 vuotiasta miestä kohden.

Lisäksi tilastokeskuksessa on saatavissa seuraavat kertoimet:

18. Ikärakennekerroin: 45 vuotta täyttäneiden keskiväkiluku prosentteina keskiväkiluvusta.
19. Hedelmällisyysindeksi: alueen yleinen hedelmällisyysluku verrattuna koko maan yleiseen hedelmällisyyslukuun (koko maa = 100).
20. Kuolleisuusindeksi: alueen yleinen kuolleisuusluku verrattuna koko maan yleiseen kuolleisuuslukuun (koko maa = 100).
21. Tulomuuttoindeksi: alueen tulomuutto (maassamuuton tulomuutto sekä tulosiirtolaisuus) verrattuna koko maan vastaavaan lukuun (koko maa = 100).
22. Lähtömuuttoindeksi: alueen lähtömuutto (maassamuuton lähtömuutto sekä lähtösiirtolaisuus) verrattuna koko maan vastaavaan lukuun (koko maa = 100).
23. Nettomuuttoindeksi 1: (viisivuotisyhteenvedoissa) alueen koko muuttotase suhteessa keskihajontaansa.
24. Nettomuuttoindeksi 2: vuoden lopun 16-45 vuotiaiden väkiluvun suhde edellisen vuoden lopun 15-44 vuotiaiden väkilukuun ja tilastovuoden kuolleisuuteen.

Kertoimet on laskettu suhteuttamalla väestömuutostapahtumien lukumäärä yleensä alueen keskiväkilukuun, tai milloin kerroin kuvaa jotakin osaväestöä, vastaavan osaväestön keskiväkilukuun. Esim. 15-44 vuotiaiden miesten lähtösiirtolaisuus on suhteutettu 15-44 vuotiaiden miesten keskiväkilukuun alueella. Syntyvyyttä kuvaavat kertoimet muodostavat tietenkin poikkeuksen tähän periaatteeseen.

Kertoimet on laskettu väestömuutostilastojen vuosiaineistoista. Iän perusteella rajatut kertoimet eivät aina täsmälleen vastaa väestömuutostilastojen julkaisemia lukuja. Syy on erilaisessa iän määrittelytavassa. Väestömuutoskertoimia laskettaessa on käytetty ikää vuoden alussa, kun väestömuutostilastoissa on yleensä käytetty ikää muutoksen tapahtumahetkellä. Tämän erilaisen määrittelytavan vaikutus kertoimiin on pieni - mitä suurempi alueen väkiluku, sen vähäisempi merkitys on sillä, miten ikä määritellään. Kokeeksi laskettiin 37:ssä alle 1 500 asukkaan kunnassa tulo- ja lähtömuuttokertoimet molemmilla ikämääritelmillä. Lasketut tulomuuttokertoimet poikkesivat toisistaan keskimäärin 3.1 promilleyksikköä ja lähtömuuttokertoimet keskimäärin 2.6 promilleyksikköä.

Alle 10 000 asukkaan kunnissa väestönmuutosten vuotuinen satunnaisvaihtelu on suurta, joten pienien kuntien väestönmuutosten tarkasteluun tulisi käyttää useamman vuoden tietoja.

Tilastokeskus aikoo tuottaa väestönmuutos- ja väestörakennekertoimia vuosittain sekä viisivuotisyhteenvetoina vuodesta 1971 lähtien. Vuosien 1971-1973 sekä 1975 kertoimet valmistuvat tilastokeskuksessa kevään 1977 kuluessa.
