TEOLLISUUSTUOTANNON VOLYYMI-INDEKSI UUDISTETTU. PERUSVUOSI 1980

Tilastokeskuksessa on laskettu teollisuustuotannon volyymi-indeksiä kuukausittain vuodesta 1950. Indeksien muut aikaisemmat perusvuodet ovat 1954, 1959, 1970 ja 1975. Teollisuustuotannon volyymi-indeksisarjat julkaistaan nyt ensimmäistä kertaa vuosi 1980 perusvuotena. Sarjat ovat oheisessa julkaisussa vuodesta 1980 vuoden 1983 helmikuuhun. Vuodesta 1981 lähtien indeksit ovat ennakkollisia.

Sivulla 5 olevassa taulussa on esitetty uuden indeksin toimialoitteinen painorakenne sekä vertailun vuoksi myös vanhan indeksin (1975=100) painorakenne. Toimialoitteinen painorakenne on laadittu vuoden 1980 teollisuustilaston jalostusarvojen pohjalta.

Uudistuksessa on laskentamenetelmään tehty muutokset, jonka avulla voidaan joustavasti ottaa huomioon indeksin luotettavuuden kannalta merkittävien uusien tietojen ja puuttuvien tietojen vaikutus indeksisarjoihin. Perustiedot on saatettu ajan tasalle pääasiassa vuoden 1980 teollisuustilaston tuotetilaston tietojen perusteella. Kuukausittaisessa volyymi-indeksissä tuotannon kehitystä seurataan tuotettujen tavaroiden määrien avulla. Mikäli joillakin toimialoilla ei ole ollut mahdollista saada määrätietoja tuotetuista tavaroista kuukausittain, on käytetty työntekijöiden tekemiä työtunteja tai eräissä tapauksissa tuotantoon käytettyjä muita panostietoja (kulutettu sähköenergia tai raaka-aineet) korvikemuuttujina. Työtuntitiedot on korjattu työn tuottavuuden keskimääräisen kasvun mukaisilla tuottavuuskorjauksilla.

Taulussa 1 kuvataan teollisuustuotannon kuukausittaiset volyymi-indeksit sekä indeksien muutosprosentit verrattuna edellisen vuoden vastaaviin kuukausiin. Taulussa 2 kuvataan teollisuustuotannon volyymi-indeksit työpäivää kohti. Taulussa oleva lyhenne ULT tarkoittaa teollisuustuotannon kuukausittaisen volyymi-indeksien keskiarvoa laskettuna vuoden alusta lähtien.

INDUSTRIPRODUKTIONENS VOLYMINDEKSI REVIDERAD, BASÅR 1980

Industriproduktionens volymindex har vid Statistiska centralen beräknats månadsvis sedan 1950. Indexens tidigare basår är åren 1954, 1959, 1970 och 1975. Industriproduktionens volymindexserier publiceras nu för första gången med 1980 som basår. Serierna i denna publicering är från 1980 till februari 1983. Från och med 1981 är indexuppgifterna preliminära.

Tabellen på sidan 5 ger den nya indexens viktstruktur enligt näringsgren, samt för jämförelsens skull även den förra indexens (1975=100) viktstruktur. Viktstrukturen enligt näringsgren har uppgjorts på basen av förädlingsvärden i 1980 års industristatistik.

Vid revideringen har räkningsättet ändrats så att de nya och bristande uppgifternas inverkan på indexserierna nu snarare kan tas i betraktande när det gäller indexens tillförlitlighet. Basuppgifterna har uppdaterats i huvudsak på basen av uppgifterna i produktstatistiken i 1980 års industristatistik. I den månatliga volymindexen följs produktionsutvecklingen med hjälp av de producerade varornas mängder. Om det inom någon näringsgren inte varit möjligt att månatligen få mängduppgifter om de producerade varorna har man använt de arbetstimmar som arbetstagarna utför eller i vissa fall uppgifter om andra insatser (förbrukad elenergi eller råämnen) som ersättande variabler.

I tabell 1 anges industriproduktionens volymindex samt indexernas procentuella förändringar från föregående års motsvarande månader. I tabell 2 beskriver man industriproduktionens volymindex per arbetsdag. Förkortningen ULT i tabellerna avser medelvärdet av de månatliga volymindexerna räknade från årets början.

THE REVISED VOLUME INDEX OF INDUSTRIAL PRODUCTION, 1980 THE BASE YEAR

The Central Statistical Office of Finland has compiled the monthly volume index of industrial production since 1950. The earlier base years of this index are 1954, 1959, 1970 and 1975. The volume index series of industrial production will now be published for the first time with the year 1980 as the base year. The series in this publication cover the period from the beginning of 1980 to February 1983. From 1981 onwards the index data are preliminary.

The table on page 5 shows the weight structure of the new index by industrial branch, and for the sake of comparison also the weight structure of the previous index (1975=100). The weight structure by branches has been made up on the basis of the value added figures in the industrial statistics of 1980.

In the revision the calculation method has been changed, and by means of the new method the impact of important new data and failing data on index series can easily be taken into consideration. The basic data have been updated primarily on the basis of data on products in the 1980 industrial statistics. In the monthly volume indices the development of production is followed up by the amount of goods produced. If the amount of goods produced is not available, the number of hours worked by the employees has been used, and in some cases other data, e.g. data on the consumption of electrical energy or raw-material, as substitute variables. The data on working hours have been corrected by coefficients of productivity according to the average growth of productivity.

Table 1 includes the volume indices and the changes in percentage from the corresponding months the year before. Table 2 presents the volume indices of industrial production per working day. The abbreviation ULT in the tables refer to the mean value of the monthly volume indices counted from the beginning of the year.
